Annex 6: UNDP Social and Environmental and Social Screening Procedures (SESP)

Project Information

Project Information	
1. Project Title	National child project under the GEF Africa Mini-grids Program
2. Project Number (i.e. Atlas project ID, PIMS+)	UNDP ID 6338
3. Location (Global/Region/Country)	Ethiopia
4. Project stage (Design or Implementation)	Design stage
5. Date	25 June 2021

Part A. Integrating Programming Principles to Strengthen Social and Environmental Sustainability

QUESTION 1: How Does the Project Integrate the Programming Principles in order to Strengthen Social and Environmental Sustainability?

Briefly describe in the space below how the project mainstreams the human-rights based approach

Rights holders are women and men, a great number belongs to the poor and marginalized sector such as customary community groups, rural population and resource dependent groups. This project will ensure that their rights are exercised by facilitating their own capacity to think, act, organize, and advocate these rights; and

Primary duty-bearers comprise the State, with all its provincial agencies and institutions, and the staff dedicated to the project. This project will ensure their mandate will respect, protect, promote and fulfill the rights of the poor and marginalized sectors/groups in all spheres of life.

The project addresses the human rights to sustainable development through the provision of measures to prevent the potential pollution from batteries and e-waste used at the project, as well as the monitored reduction of greenhouse gases emissions. Likewise, the project addresses the human rights to poverty alleviation and sustaining peace by taking into account the local communities as a workforce, including the fuel/energy sellers from the informal sector. Similarly, the project will ensure fair distribution of development opportunities and benefits through the empowerment of disadvantaged groups for example by capacity building.

Altogether, the project fully incorporates the human Leave No One Behind approach, in particular through ensuring the participation, inclusion, equality and non-discrimination of disadvantaged groups (marginalized, discriminated and excluded), including the informal sector. This is achieved by design in the project, to empower them as active agents of the development process, facilitating their participation on the project design and implementation through the requirements established in this report. Similarly, the requirements here include actions to be taken related to advocacy, creating enabling environments, capacity development and support for civil society, community empowerment, and enhancing the quality and accessibility of services.

Across all project components, activities include the participation of varied stakeholders through capacity building strategies at the policy, program, monitoring and evaluation, knowledge management on environmental conservation, human rights, gender equality, and social protection perspectives so that the intended project results are achieved also beyond the project cycle.

Briefly describe in the space below how the project is likely to improve gender equality and women's empowerment

As the implications of gender in the sector are not fully understood or appreciated, a gender analysis has been conducted during project preparation to fully gauge the gender implications, identify possible interventions that can meaningfully improve and enhance women's participation, and develop specific indicators and targets related to gender equality. Based on that a gender action plan has been established at the same phase for the preparation of specific investment interventions that will include along the whole project cycle special attention for vulnerable groups, especially women and girls, who face multiple and intersecting forms of discrimination in the energy sector and in general in the society. Women are often marginalized and excluded from other forms of formal participation in the sector and the economy; often, they are reduced to the lower positions in the job market and as beneficiaries.

Briefly describe in the space below how the project mainstreams sustainability and resilience

The project is primarily focused on environmental sustainability. It should be noted that no activities that could cause harm may proceed until assessments are undertaken and management plans are in place for specific sites. The monitoring, reporting and verification (MRV) system that will be set up by the project will include social, environmental and financial indicators to safeguard the improvement of the individuals and local communities, with an emphasis on the most vulnerable groups and individuals identified. Additionally, a comprehensive Quality Assurance Framework (QAF) is expected to be operationalized through technical support from the regional AMP. Finally, the mechanisms established in this report will help to strengthen the enforcement of existing laws interacting with the energy sector in order to fulfil public services while promoting the vulnerable groups and their human rights involved to achieve such task.

Briefly describe in the space below how the project strengthens accountability to stakeholders

The stakeholder engagement plan, the information disclosure process, the grievance redress and the accountability mechanisms will strengthen remarkably the accountability of the most vulnerable groups and individuals affected by the Project both directly and indirectly at a fair level to the conventional groups. These processes and mechanisms have been established at the design phase and will continue along the project cycle. For example, to achieve this a multi-stakeholder platform will be set up to enhance horizontal participation and will include representatives from a varied range of groups in society.

Part B. Identifying and Managing Social and Environmental Risks

QUESTION 2: What are the Potential Social and Environmental Risks? Note: Complete SESP Attachment 1 before responding to Question 2.			ficance of the potential social and environmental risks? ow before proceeding to Question 5	QUESTION 6: Describe the assessment and management measures for each risk rated Moderate, Substantial or High
Risk Description (broken down by event, cause, impact) ¹	Impact and Likelihood (1- 5)	Significance (Low, Moderate, Substantial, High)	Comments (optional)	Description of assessment and management measures for risks rated as Moderate, Substantial or High
RISK 1: Risk on lack of capacities. The scope of this risk belongs to Overarching Principle 1 and Programmatic Principle 2. <u>Event</u> : It may occur that the capacity of duty-bearers (e.g. government agencies, local skilled staff) for implementation of some project activities may be insufficient. Similarly occurs with the capacity of rights- holders (e.g. project-affected persons) to claim their rights. <u>Cause</u> : The project activities considered involve innovation and so that may be relatively new in the project's area of influence for both duty-bearers and right-holders. Also, the UNDP Universal Human Rights Index informs concerns in this country regarding the capacities of right-holder related groups and public officials/institutions. <u>Impact</u> : This may pose a potential harm to meeting the rights of right-holders.	l = 4 L = 2	Moderate	 This risk is relevant to the project activities supporting all components: Policy and regulations Business model innovation and private business Scaled-up financing Digital, Knowledge Management and Monitoring and Evaluation This risk is not covered by the national legal requirements to conduct the project activities and/or when requirements are in place there are signs of been inconsistently enforced to the UNDP SES level. 	As the project is Substantial risk, an ESMF has been prepared and annexed to the ProDoc. The ESMF covers all project risks. It contains procedures for the further screening, assessment and management measures that are required during the project's implementation for compliance with the SES. A Stakeholder Engagement Plan has been prepared to manage this risk. See ESMF Attachment II (Risks A&M specifications) for details of assessment and management of this risk and all others.

-ds AA

¹ See "SESP Summary" for detailed breakdown by event, cause, impact.

	r		1	
RISK 2: Risk of project activities not being safeguards responsive during the project life cycle. . The scope of this risk belongs to Overarching Principle 1 and Programmatic Principle 2. Risk description: See tools implemented for the Programmatic Principles 3 and 5, Standards 3-7.	1 = 3 L = 3	Moderate	Note that prohibited grounds of discrimination include race, ethnicity, sex, age, language, disability, sexual orientation, gender identity, religion, political or other opinion, national or social or geographical origin, property, birth, health status or other status including as an indigenous person or as a member of a minority. Unless safeguard measures are applied and enforced in terms of project interventions and future replicates when market escalates, the reality on the ground is that government policy decisions and investment promotion strategies take limited consideration of certain environmental and social aspects. A transversal aspect that could pose an unintended impact, particularly from the duty-bearers end. Therefore, this risk is relevant to the project activities supporting all components: - Policy and regulations - Business model innovation and private business - Scaled-up financing - Digital, Knowledge Management and Monitoring and Evaluation	See ESMF Attachment II for details of assessment and management of this risk.
RISK 3: Risk of exclusion of affected stakeholders due to their vulnerability and/or potential concerns about the project. The scope of this risk belongs to Programmatic Principle 5. <u>Event</u> : Stakeholders may be excluded at the participatory/beneficial activities of the project, and/or retaliation/reprisals may occur based on their grievances and objections . <u>Cause</u> : The UNDP Universal Human Rights Index informs concerns in this country regarding the situation of vulnerable groups/persons and some forms of freedom. And, there is no evidence that the national regulatory framework requires and/or implements clear practices at mini-grid projects for the inclusion of all potentially affected stakeholders, in particular disadvantaged groups, to fully participating in decisions that may affect them for the type of activities included in this project. Similarly, there is no evidence that grievances or objections from these same stakeholders are being managed and resolved as a usual practice through internationally recognized methods.	I = 3 L = 3	Moderate	 This risk is relevant to the project activities supporting the following components: Policy and regulations Business model innovation and private business Scaled-up financing Digital, Knowledge Management and Monitoring and Evaluation This risk is not covered by the national legal requirements to conduct the project activities and/or when requirements are in place there are signs of been inconsistently enforced to the UNDP SES level. 	A Stakeholder Engagement Plan has been prepared to manage this risk. A project-level GRM will be put in place. See ESMF Attachment II for details of assessment and management of this risk.

		1		
Impact: This may pose a challenge to				
ensure that affected stakeholders will				
fully participate in decisions that will				
affect them, they will feel safe to

RISK 8: Risk of local climate change events, and weather & hydro related disasters. The scope of this risk belongs to Project Standard 2. <u>Event:</u> It is realistic to consider that climate events (i.e. earthquakes, floods, landslides, severe winds) may occur in the project's area of influence and may affect to the built structures. <u>Cause</u> : The global increase of future climate change and subsequent disaster. And, all mini- grids are open air structures exposed to climate events and involve build structures that may be vulnerable to the impacts of climate change or disasters. <u>Impact</u> : They could increase climate related effects and the number of disasters in the project area.	I =3 L = 3	Moderate	 This risk is relevant to the project activities supporting the following components: Policy and regulations Business model innovation and private business Scaled-up financing Digital, Knowledge Management and Monitoring and Evaluation Output specifics: This risk applies to activities related to implementing pilots and their M&E but also to policy and regulatory activities due to the indirect potential impacts, for example, if they lead to expanded minigrid coverage after the project across the country. 	 Country specifics: At the time of this document no information was yet available to study this risk at the site level. Therefore, to be conservative, it is realistic to assume that each site will require assessment and management. Potential gaps to be addressed will be identified through the gap analysis as indicated in the ESMF. The necessary management plan/measures will be put in place as part of ESMP(s), based on the ESIAs. See ESMF Attachment II for details of assessment and management of this risk.
RISK 9: Risk of overestimated emissions due to embedded activities. The scope of this risk belongs to Project Standard 2. <u>Event:</u> The procurement of equipment for the project will probably be outsourced internationally resulting in embedded emissions. <u>Cause</u> : All mini- grids involve solar panels and other activities that be imply indirect carbon emissions due to the project. <u>Impact</u> : They could decrease the calculated climate impact related to emissions avoided by the project.	l = 2 L = 2	Low	 This risk is relevant to the project activities supporting the following components: Policy and regulations Business model innovation and private business Scaled-up financing Digital, Knowledge Management and Monitoring and Evaluation Output specifics: This risk applies to activities related to implementing pilots and their M&E but also to policy and regulatory activities due to the indirect potential impacts, for example, if they lead to expanded minigrid coverage after the project across the country. 	See ESMF Attachment II for details of assessment and management of this risk. Though the risk is Low, it will be covered by the project's assessments as needed for SES compliance.
RISK 10: Risk of overestimated emissions due to aggregation to a third-party project. The scope of this risk belongs to Project Standard 2. <u>Event:</u> The aggregation of the activities within the AMP to a third-party project may be accounted as reductions	1 = 3 L = 2	Moderate	This risk is relevant to the project activities supporting the following components: - Policy and regulations - Business model innovation and private business - Scaled-up financing - Digital, Knowledge Management and Monitoring and Evaluation Output specifics: Evaluation	There are project activities potentially considering to act as an aggregation to third-party initiatives. Therefore, to be conservative, it is realistic to assume that each site will require assessment and management. See ESMF Attachment II for details of assessment and management of this risk.
assigned to the AMP activities instead of			- This risk applies to activities related to implementing	

the third-party project. <u>Cause</u> : Third party activities may be difficult to discern between projects. <u>Impact</u> : Assigning the achievements of the overall project (including third party activities) to which the AMP activities are aggregated would lead to an increase of carbon emission avoided to the atmosphere. RISK 11: Risk on the community due to	1=2	Low	pilots and their M&E but also to policy and regulatory activities due to the indirect potential impacts, for example, if they lead to expanded minigrid coverage after the project across the country.	Country specifics:
domestic connections and electricity usage, and presence of hazardous materials (mainly batteries and/or chemicals for land clearance). The scope of this risk belongs to Project Standard 3.	L = 2		 following components: Policy and regulations Business model innovation and private business Scaled-up financing Digital, Knowledge Management and Monitoring and Evaluation This project's activities will be aggregated to other ongoing projects with equivalent safeguard requirements to UNDP focused on this 	 At the time of this document no information was yet available to study this risk at the site level. Therefore, to be conservative, it is realistic to assume that each site will require assessment and management. Potential gaps to be addressed will be identified through the gap analysis as indicated in the ESMF. The necessary management plan/measures will be put in place as part of ESMP(s), based on the ESIAs. In particular, operators,
become hazardous to the community. <u>Cause</u> : The use of potentially hazardous materials by the project, domestic electrical wiring and connection activities and subsequent domestic usage of electricity. <u>Impact</u> : the novelty of some structures and practices brought about by the project could become a source of harm if not accompanied with concomitant awareness of risks and safe practices.			 provided that it can be demonstrated the risk can be mitigated through such third-party requirements and capacity. Output specifics: This risk applies to activities related to implementing pilots and their M&E but also to policy and regulatory activities due to the indirect potential impacts, for example, if they lead to expanded minigrid coverage after the project across the country. 	contractors and owners of sites shall be required to abide by the ESMP's requirements on safety measures and minimum qualifications for the handling of hazardous materials. Similarly, those responsible for connecting households should ensure the provision of qualified electrician services to do so. Consumer awareness campaigns should also be performed, including through local workshops, clear signage (pictograms and local language indications) and awareness-raising activities in schools and public spaces to inform communities of risks associated with installations (e.g. prevention of trespassing and/or makeshifts connections attempts, etc.) and of the safe usage of electricity domestically. See ESMF Attachment II for details of assessment and management
RISK 12: Ambient perturbance on the community due to intense works locally at construction and decommissioning, and new economic activities subsequent from productive use of the energy. The scope of this risk belongs to Project Standard 3.	l = 2 L = 2	Low	This risk is relevant to the project activities supporting the following components: - Policy and regulations - Business model innovation and private business - Scaled-up financing - Digital, Knowledge Management and Monitoring and Evaluation	of this risk. Country specifics: - At the time of this document no information was yet available to study this risk at the site level. Therefore, to be conservative, it is realistic to assume that each site will require assessment and management. Potential gaps to be addressed will be identified through the gap analysis as indicated in the ESMF.
Event: It may occur that some new activities and/or structures may interact with the surrounding area and/or involve the alteration of the normal functioning of the community health, safety and/or security in the project's area of influence, mainly as noise and			This project's activities will be aggregated to other ongoing projects with equivalent safeguard requirements to UNDP focused on this provided that it can be demonstrated the risk can be mitigated through such third-party requirements and capacity. Output specifics: - This risk applies to activities related to implementing pilots and their M&E but also to policy and regulatory	The necessary management plan/measures, if any given this risk is considered Low, will be put in place as part of ESMP(s), based on the ESIAs. See ESMF Attachment II for details of assessment and management of this risk.

physical hazards. <u>Cause</u> : The construction or/and decommissioning of the mini-grid and the energy generated by the project will raise new activities and/or new built structures. <u>Impact</u> : This may lead to the perturbance of the community's health, safety and/or security.			activities due to the indirect potential impacts, for example, if they lead to expanded minigrid coverage after the project across the country.	
RISK 13: Risk on community health, safety and/or security due to the influx of people, mainly project workers and other new comers subsequent to the new economic activities resulting from the productive use of the energy. The scope of this risk belongs to Project Standard 3.	I = 2 L = 2	Low	This risk is relevant to the project activities supporting the following components: - Policy and regulations - Business model innovation and private business - Scaled-up financing - Digital, Knowledge Management and Monitoring and Evaluation	Country specifics: - At the time of this document no information was yet available to study this risk at the site level. Therefore, to be conservative, it is realistic to assume that each site will require assessment and management. Potential gaps to be addressed will be identified through the gap analysis as indicated in the ESMF. The necessary management plan/measures, if any given this risk is
Event: It may occur that the new activities in the local area will attract new comers in the project's area of influence. <u>Cause</u> : The project construction/decommissioning and the energy generated by the project will raise new activities and/or new built structures. <u>Impact</u> : This may lead to effects on community health, safety and/or security as this new influx of people, expected to be mainly men, may interact with the local residents and/or involve the alteration of the normal functioning of the community leading to new diseases and/or gender safety concerns.			 with equivalent safeguard requirements to UNDP focused on this provided that it can be demonstrated the risk can be mitigated through such third-party requirements and capacity. Output specifics: This risk applies to activities related to implementing pilots and their M&E but also to policy and regulatory activities due to the indirect potential impacts, for example, if they lead to expanded minigrid coverage after the project across the country. This risk scores higher than the environmental risks because it is not covered by the national legal requirements are in place there are signs of been inconsistently enforced to the UNDP SES level. 	considered low, will be put in place as part of ESMP(s), based on the ESIAs. See ESMF Attachment II for details of assessment and management of this risk.
RISK 14: Risk on damage of cultural heritage. The scope of this risk belongs to Project Standard 4. <u>Event:</u> It may occur that excavations and other environmental changes take place, and they may be within or	I = 3 L = 1	Low	 This risk is relevant to the project activities supporting the following components: Policy and regulations Business model innovation and private business Scaled-up financing Digital, Knowledge Management and Monitoring and Evaluation 	Country specifics: - At the time of this document no information was yet available to study this risk at the site level. Therefore, to be conservative, it is realistic to assume that each site will require assessment and management. The scope of this risk belongs to Project Standard 5. <u>Event:</u> Traditional fuels supplied by local providers, including those from the informal/traditional sectors see their market diminished. <u>Cause</u> : Some mini- grid systems and project appliances to be implemented may replace an activity that was fueled with other energy sources like wood charcoal, paraffin, kerosene, diesel. For example in the households these activities may be cooking and lighting while in the community/commercial scope it may be diesel for the existing mini-grids. <u>Impact</u> : the change on the fuel used (i.e. from charcoal, private diesel mini-grids to the service the renewable energy mini- grid provides) would lead to the loos of income for fuel suppliers, potentially these are mainly poor women selling in			 Policy and regulations Business model innovation and private business Scaled-up financing Digital, Knowledge Management and Monitoring and Evaluation Output specifics: This risk applies to activities related to implementing pilots and their M&E but also to policy and regulatory activities due to the indirect potential impacts, for example, if they lead to expanded minigrid coverage after the project across the country. This risk is not covered by the national legal requirements are in place there are signs of been inconsistently enforced to the UNDP SES level. 	available to study this risk at the site level. Therefore, to be conservative, it is realistic to assume that each site will require assessment and management. Potential gaps to be addressed will be identified through the gap analysis as indicated in the ESMF. The necessary management plan/measures will be put in place as part of ESMP(s), based on the ESIAs. See ESMF Attachment II for details of assessment and management of this risk.
the informal market. RISK 17: Risk of economic displacement towards the payment of energy services replacing the previous options. The scope of this risk belongs to Project Standard 5.	I = 4 L = 1	Low	This risk is relevant to the project activities supporting the following components: - Policy and regulations - Business model innovation and private business - Scaled-up financing - Digital, Knowledge Management and Monitoring and Evaluation	Country specifics: - At the time of this document no information was yet available to study this risk at the site level. Therefore, to be conservative, it is realistic to assume that each site will require assessment and management. Potential gaps to be addressed will be identified through the gap analysis as indicated in the ESMF.
Event: Electricity supplied by the project represents a higher cost to users that previously. <u>Cause</u> : Poor users have no economic means to face the increased costs of the energy provided by the project. <u>Impact</u> : this would lead to the increase of debt due to electricity buying.			Output specifics: - This risk applies to activities related to implementing pilots and their M&E but also to policy and regulatory activities due to the indirect potential impacts, for example, if they lead to expanded minigrid coverage after the project across the country.	The necessary management plan/measures, if any given this risk is low, will be put in place as part of ESMP(s), based on the ESIAs. See ESMF Attachment II for details of assessment and management of this risk.
RISK 18: Risk to indigenous peoples. The scope of this risk belongs to Project Standard 6.	l =3 L = 3	Moderate	This risk is not covered by the national legal requirements to conduct the project activities and/or when requirements are in place there are signs of been inconsistently enforced to the UNDP SES level. Due to the relative nature of the term "indigenous" a generic concept is considered. This may include tribes, first peoples/nations, aboriginals, ethnic groups, occupational and	Country specifics: - At the PPG phase, these countries have confirmed the
Event: Indigenous Peoples may be			geographical related groups like hunter-gatherers, nomads, peasants, hill people, etc., are also considered for all practical	presence of indigenous groups at the national level. This increases the risks of the project on indigenous peoples.

excluded at the participatory/beneficial activities of the project. <u>Cause</u> : The formal oriented nature of energy and the limited social statues and opportunities identified for Indigenous Peoples. <u>Impact</u> : This may pose a challenge to ensure that Indigenous Peoples will have the chance to participate at the decisions-making level.			 purposes as "indigenous peoples". This risk is relevant to the project activities supporting the following components: Policy and regulations Business model innovation and private business Scaled-up financing Digital, Knowledge Management and Monitoring and Evaluation Output specifics: This risk applies to activities related to implementing pilots and their M&E but also to policy and regulatory activities due to the indirect potential impacts, for example, if they lead to expanded minigrid coverage after the project across the country. This risk is not covered by the national legal requirements to conduct the project activities and/or when requirements are in place there are signs of been inconsistently enforced to the UNDP SES level. Therefore, if no mitigation or management measures within the Environmental and Social safeguards were to be put in place this risk would be important. 	At the time of this document Indigenous Peoples studies have been conducted by an Indigenous Peoples expert. Therefore, it is expected that the risks identified here will be mitigated and managed during the project cycle. As part of the ESIA/ESMP, an Indigenous Peoples Plan will be put in place and FPIC secured, if necessary for SES compliance. See ESMF Attachment II for details of assessment and management of this risk.
RISK 19a: Risk on labour conditions. The scope of this risk belongs to Project Standard 7. <u>Event:</u> It may occur that working conditions are not meeting the minimum criteria to satisfy UNDP's requirements. <u>Cause</u> : all project stages (i.e. construction, operation, decommissioning) will require labour, some of which may be sourced to unskilled/manual labourers who could be less familiar with the type of installations considered for this project and the concomitant occupational health and safety (OHS) requirements and risks. Maintenance of the right-of-way and bush-clearing under transmission lines by manual labourers is especially relevant in this context. <u>Impact</u> : This may lead to untrained manual laborers (in particular but not exclusively) suffering accidents stemming from lack of training, awareness or availability of adequate tools or individual protective equipment	I = 3 L = 3	Moderate	 This risk is relevant to the project activities supporting the following components: Policy and regulations Business model innovation and private business Scaled-up financing Digital, Knowledge Management and Monitoring and Evaluation This project's activities will be aggregated to other ongoing projects with equivalent safeguard requirements to UNDP focused on this if it can be demonstrated the risk can be mitigated through such third-party requirements and capacity. Output specifics: This risk applies to activities related to implementing pilots and their M&E but also to policy and regulatory activities due to the indirect potential impacts, for example, if they lead to expanded minigrid coverage after the project across the country. This risk is not covered by the national legal requirements to conduct the project activities and/or when requirements are in place there are signs of been inconsistently enforced to the UNDP SES level. 	 Country specifics: At the time of this document no information was yet available to study this risk at the site level. Therefore, to be conservative, it is realistic to assume that each site will require assessment and management. Potential gaps to be addressed will be identified through the gap analysis as indicated in the ESMF. The necessary management plan/measures will be put in place as part of ESMP(s), based on the ESIAs. In particular, operators, contractors and owners of sites shall be required to abide by OHS measures identified in the ESMP, including for instance operational procedures manual(s), safety information, training program for all workers, the provision of adequate safety equipment, and the clarification of roles and responsibilities at each phase of the project. See ESMF Attachment II for details of assessment and management of this risk.

handling directives, disposal and/or recycling mandate for obsolete equipment, this could result in additional waste generation, including of hazardous/phase-outs materials, chemicals or other pollutants (e.g. from batteries). Failure to recycle non- hazardous waste could also contribute to additional waste generation. (NB: The UNDP Universal Human Rights Index informs the raising of concerns for this country regarding "responsible consumption and production, clean water and sanitation, and life on land").				
RISK 21: Upstream risks due to policy or regulatory changes Event: It may occur that changes to the current policies and regulations will have an upstream effect. <u>Cause</u> : New policies and regulations alien to the pre- existing conditions are an alteration, in essence. <u>Impact</u> : Expected unforeseen impacts should be expected according to the type of sector and activity to develop.	l = 4 L = 4	Substantial	This risk is relevant to the project activities supporting the following components: - Policy and regulations - Knowledge Management and Monitoring and Evaluation	A SESA will be conducted on activities supporting policy and/or sector reforms to include the requirements and measures in order to minimise these unforeseen risks of future projects across the country during the scale-up of activities. See ESMF Attachment II for details of assessment and management of this risk.

QUESTION 4: What is the overall project risk	categoriza	zation?			
Low Risk		•			
Moderate Risk		•			
Substantial Risk	x	 Note: Requirements from Question 5 apply to this level of risk, for each Programmatic Principle and Project Standard triggered at this level of risk, a scoped study on key risks is required. Project aspects rated as Low Risk may be able to proceed while the assessments for other higher risk activities are being conducted. 			
High Risk		•			
QUESTION 5: Based on the identified risks and risk categorization, what requirements of the SES are triggered? (check all that apply)					
Question only required for Moderate, Substan	ntial and Hi	High Risk projects			
Is assessment required? (check if "yes")	x	Status? (completed, planned)			

1 1 1 1		Challen Analusia
if yes, indicate overall type and status	9	Stakeholder Analysis essment - Completed, a Stakeholder Engagement Plan has been conducted at the PPG phase before PAC approval of the project. - Planned, a Stakeholder Engagement Plan for each sub-project (as needed for SES compliance) and will need to update the completed previous to the approval of the sub-project. Gender Action Plan: See ProDoc; completed during PPG.
		 <u>Capacity assessment for duty-bearers</u> Ongoing, a Capacity Assessment for duty-bearers (top and bottom, i.e. governmer security personnel) at the project has been initiated at the PPG phase before approval of the project. See ProDoc. Additionally, at the sub-project level, further capacity assessment for duty-be locally is planned and will need to the completed previous to the approval of each project.
		 <u>Capacity assessment for right-holders</u> Ongoing, a Capacity Assessment for rights-holders (top and bottom, i.e. African/national and local) at the project has been initiated at the PPG phase b PAC approval of the project. See ProDoc. Additionally, at the sub-project level, further capacity assessment for right-holders locally is planned and will need to the completed previous to the approval of each project.
		Indigenous Peoples analysis: Completed at the PPG phase before PAC approval of the project.
		 Other targeted assessments might be required (separate from the ESIA requirements below) and will be determined during implementation of the ESMF. That could include alia): A Cultural Heritage Analysis A climate risk assessment, A disaster risk assessment, A hazard assessment, A health impact assessment, A Social and Environmental Impact Assessment for physical and econdisplacement, Indirect climate change and disaster risks will be studied, including the quantifier of GHG emission reductions for scope 2 and 3 (equivalent to a Life Cycle Analysis, cradle to grave). A Pollution and Resource Efficiency Assessment

SESP Attachment 1. Social and Environmental Risk Screening Checklist

LIIECKI	st Potential Social and Environmental <u>Risks</u>	A manuar
	ching Principle 1: Leave No One Behind mming Principle 2: Human Rights	Answer (Yes/No
P.1	Have local communities or individuals raised human rights concerns regarding the project (e.g. during the stakeholder engagement process, grievance processes, public statements)?	No
P.2	Is there a risk that duty-bearers (e.g. government agencies) do not have the capacity to meet their obligations in the project?	Yes
P.3	Is there a risk that rights-holders (e.g. project-affected persons) do not have the capacity to claim their rights?	Yes
Nould	the project potentially involve or lead to:	
P.4		Yes
P.5	inequitable or discriminatory impacts on affected populations, particularly people living inpoverty or marginalized or excluded individuals or groups, including persons with disabilities? 16	Yes
P.6	restrictions in availability, quality of and/or access to resources or basic services, in particular to marginalized individuals or groups, including persons with disabilities?	Yes
P.7	exacerbation of conflicts among and/or the risk of violence to project-affected communities and individuals?	No
Progra	mming Principle 3: Gender Equality and Women's Empowerment	
P.8	Have women's groups/leaders raised gender equality concerns regarding the project, (e.g. during the stakeholder engagement process, grievance processes, public statements)?	No
Nould	the project potentially involve or lead to:	
P.9	adverse impacts on gender equality and/or the situation of women and girls?	Yes
P.10	reproducing discriminations against women based on gender, especially regarding participation in design and implementation or access to opportunities and benefits?	Yes
P.11	limitations on women's ability to use, develop and protect natural resources, taking into account different roles and positions of women and men in accessing environmental goods and services?	Yes
	For example, activities that could lead to natural resources degradation or depletion in communities who depend on these resources for their livelihoods and well being	
P.12	exacerbation of risks of gender-based violence?	Yes
	For example, through the influx of workers to a community, changes in community and household power dynamics, increased exposure to unsafe public places and/or transport, etc.	

¹⁶ Prohibited grounds of discrimination include race, ethnicity, sex, age, language, disability, sexual orientation, gender identity, religion, political or other opinion, national or social or geographical origin, property, birth or other status including as an indigenous person or as a member of a minority. References to "women and men" or similar is understood to include women and men, boys and girls, and other groups discriminated against based on their gender identities, such as transgender and transsexual people.

Progra	mming Principle 5: Accountability	
Nould	the project potentially involve or lead to:	
P.13	exclusion of any potentially affected stakeholders, in particular marginalized groups and excluded individuals (including persons with disabilities), from fully participating in decisions that may affect them?	Yes
P.14	grievances or objections from potentially affected stakeholders?	Yes
P.15	risks of retaliation or reprisals against stakeholders who express concerns or grievances, or who seek to participate in or to obtain information on the project?	Yes
-	-Level Standards	
	rd 1: Biodiversity Conservation and Sustainable Natural Resource Management	
	the project potentially involve or lead to:	
1.1	adverse impacts to habitats (e.g. modified, natural, and critical habitats) and/or ecosystems and ecosystem services?	Yes
	For example, through habitat loss, conversion or degradation, fragmentation, hydrological changes	
1.2	activities within or adjacent to critical habitats and/or environmentally sensitive areas, including (but not limited to) legally protected areas (e.g. nature reserve, national park), areas proposed for protection, or recognized as such by authoritative sources and/or indigenous peoples or local communities?	Yes
1.3	changes to the use of lands and resources that may have adverse impacts on habitats, ecosystems, and/or livelihoods? (Note: if restrictions and/or limitations of access to lands would apply, refer to Standard 5)	Yes
L.4	risks to endangered species (e.g. reduction, encroachment on habitat)?	Yes
L.5	exacerbation of illegal wildlife trade?	Yes
L.6	introduction of invasive alien species?	Yes
L.7	adverse impacts on soils?	Yes
L.8	harvesting of natural forests, plantation development, or reforestation?	Yes
L.9	significant agricultural production?	Yes
L.10	animal husbandry or harvesting of fish populations or other aquatic species?	Yes
L.11	significant extraction, diversion or containment of surface or ground water?	Yes
	For example, construction of dams, reservoirs, river basin developments, groundwater extraction	
L.12	handling or utilization of genetically modified organisms/living modified organisms? $^{ m 17}$	Yes
L.13	utilization of genetic resources? (e.g. collection and/or harvesting, commercial development) 18	Yes
L.14	adverse transboundary or global environmental concerns?	Yes
	rd 2: Climate Change and Disaster Risks	

Description on Biological Diversity and its Cartagena Protocol on Biosafety.
 AASee the Convention on Biological Diversity and its Nagoya Protocol on access and benefit sharing from use of genetic resources.

2.1	areas subject to hazards such as earthquakes, floods, landslides, severe winds, storm surges, tsunami or volcanic eruptions?	Yes
2.2	outputs and outcomes sensitive or vulnerable to potential impacts of climate change or disasters?	No
	For example, through increased precipitation, drought, temperature, salinity, extreme events, earthquakes	
2.3	increases in vulnerability to climate change impacts or disaster risks now or in the future (also known as maladaptive or negative coping practices)? For example, changes to land use planning may encourage further development of floodplains, potentially	No
	increasing the population's vulnerability to climate change, specifically flooding	
2.4	increases of greenhouse gas emissions, black carbon emissions or other drivers of climate change?	Yes
Standa	rd 3: Community Health, Safety and Security	
Would	the project potentially involve or lead to:	
3.1	construction and/or infrastructure development (e.g. roads, buildings, dams)? (Note: the GEF does not finance projects that would involve the construction or rehabilitation of large or complex dams)	Yes
3.2	air pollution, noise, vibration, traffic, injuries, physical hazards, poor surface water quality due to runoff, erosion, sanitation?	Yes
3.3	harm or losses due to failure of structural elements of the project (e.g. collapse of buildings or infrastructure)?	Yes
3.4	risks of water-borne or other vector-borne diseases (e.g. temporary breedinghabitats), communicable and noncommunicable diseases, nutritional disorders, mental health?	No
3.5	transport, storage, and use and/or disposal of hazardous or dangerous materials (e.g. explosives, fuel and other chemicals during construction and operation)?	Yes
3.6	adverse impacts on ecosystems and ecosystem services relevant to communities' health (e.g. food, surface water purification, natural buffers from flooding)?	Yes
3.7	influx of project workers to project areas?	Yes
3.8	engagement of security personnel to protect facilities and property or to support project activities?	Yes
Standa	rd 4: Cultural Heritage	
Would	the project potentially involve or lead to:	
4.1	activities adjacent to or within a Cultural Heritage site?	Yes
4.2	significant excavations, demolitions, movement of earth, flooding or other environmental changes?	Yes
4.3	adverse impacts to sites, structures, or objects with historical, cultural, artistic, traditional or religious values or intangible forms of culture (e.g. knowledge, innovations, practices)? (Note: projects intended to protect and conserve Cultural Heritage may also have inadvertent adverse impacts)	Yes
4.4	alterations to landscapes and natural features with cultural significance?	Yes
4.5	utilization of tangible and/or intangible forms (e.g. practices, traditional knowledge) of Cultural Heritage for commercial or other purposes?	Yes
Standa	ard 5: Displacement and Resettlement	
Would	the project potentially involve or lead to:	
5.1	temporary or permanent and full or partial physical displacement (including people without legally recognizable claims to land)?	Yes

5.2	economic displacement (e.g. loss of assets or access to resources due to land acquisition or access restrictions – even in the absence of physical relocation)?	Yes
.3	risk of forced evictions? ¹⁹	Yes
5.4	impacts on or changes to land tenure arrangements and/or community based property rights/customary rights to land, territories and/or resources?	Yes
tanda	rd 6: Indigenous Peoples	
Vould	the project potentially involve or lead to:	
5.1	areas where indigenous peoples are present (including project area of influence)?	Yes
5.2	activities located on lands and territories claimed by indigenous peoples?	Yes
6.3	impacts (positive or negative) to the human rights, lands, natural resources, territories, and traditional livelihoods of indigenous peoples (regardless of whether indigenous peoples possess the legal titles to such areas, whether the project is located within or outside of the lands and territories inhabited by the affected peoples, or whether the indigenous peoples are recognized as indigenous peoples by the country in question)?	Yes
	If the answer to screening question 6.3 is "yes", then the potential risk impacts are considered significant and the project would be categorized as either Substantial Risk or High Risk	
6.4	the absence of culturally appropriate consultations carried out with the objective of achieving FPIC on matters that may affect the rights and interests, lands, resources, territories and traditional livelihoods of the indigenous peoples concerned?	Yes
6.5	the utilization and/or commercial development of natural resources on lands and territories claimed by indigenous peoples?	Yes
6.6	forced eviction or the whole or partial physical or economic displacement of indigenous peoples, including through access restrictions to lands, territories, and resources?	Yes
	Consider, and where appropriate ensure, consistency with the answers under Standard 5 above	
6.7	adverse impacts on the development priorities of indigenous peoples as defined by them?	Yes
5.8	risks to the physical and cultural survival of indigenous peoples?	Yes
6.9	impacts on the Cultural Heritage of indigenous peoples, including through the commercialization or use of their traditional knowledge and practices?	Yes
	Consider, and where appropriate ensure, consistency with the answers under Standard 4 above.	
Standa	rd 7: Labour and Working Conditions	
Would	the project potentially involve or lead to: (note: applies to project and contractor workers)	
7.1	working conditions that do not meet national labour laws and international commitments?	Yes
7.2	working conditions that may deny freedom of association and collective bargaining?	Yes
7.3	use of child labour?	Yes
7.4	use of forced labour?	Yes
7.5	discriminatory working conditions and/or lack of equal opportunity?	Yes
7.6	occupational health and safety risks due to physical, chemical, biological and psychosocial hazards (including violence and harassment) throughout the project life-cycle?	Yes

¹⁹ Forced eviction is defined here as the permanent or temporary removal against their will of individuals, families or communities from the homes and/or land which they occupy, without the provision of, and access to, appropriate forms of legal or other protection. Forced evictions constitute gross violations of a range of internationally recognized human rights.

Standa	ard 8: Pollution Prevention and Resource Efficiency	
Would	the project potentially involve or lead to:	
8.1	the release of pollutants to the environment due to routine or non-routine circumstances with the potential for adverse local, regional, and/or transboundary impacts?	Yes
8.2	the generation of waste (both hazardous and non-hazardous)?	Yes
8.3	the manufacture, trade, release, and/or use of hazardous materials and/or chemicals?	Yes
8.4	the use of chemicals or materials subject to international bans or phase-outs? For example, DDT, PCBs and other chemicals listed in international conventions such as the <u>Montreal</u> <u>Protocol, Minamata Convention, Basel Convention, Rotterdam Convention</u> , <u>Stockholm Convention</u>	Yes
8.5	the application of pesticides that may have a negative effect on the environment or human health?	Yes
8.6	significant consumption of raw materials, energy, and/or water?	Yes

²⁰ Significant displacement and/or resettlement refers here to potential scale. projects involving physical resettlement and/or economic displacement are generally considered High Risk. However where potential displacement and/or resettlement may be minimal, UNDP may determine that its requirements could be met with application of standard best practice and mitigation measures without the need for a full ESIA.

²¹ Large dams are defined as those with a height of 15 meters or more from the foundation. Dams that are between 5 and 15 meters high and have a reservoir of more than 3 million cubic meters are also classified as large dams.

Complex dams are those of a height between 10 and 15 meters that present special design complexities, including an unusually large flood-handling requirement, location in a zone of high seismicity, foundations that are complex and difficult to prepare, or retention of toxic materials.
